

Environmentally friendly design-build solutions

"CH2M HILL's effective design-build delivery approach saved BSU approximately 8 months of construction time and allowed us to continue to effectively meet our community's growing water demands."

—Mike Liggins,
Director of Engineering,
Bonita Springs Utilities

Faced with faster than expected growth in the Southwest Florida community it serves, Bonita Springs Utilities, Inc. needed to quickly address the need for additional potable water, without unduly increasing stress on their freshwater, shallow aquifer. CH2M HILL promptly responded with an integrated design and construction solution that utilized a deep brackish water aquifer and reverse osmosis treatment in time to meet their increasing potable water demands.

Solutions Without Boundaries
