

Just in time design-build results

"We are extremely pleased with our relationship with CH2M HILL. They delivered on all facets of the design, construction, and operation of our facilities, and within the timeframe and budget established. Their professionalism, technical expertise, and dependability have earned them a place on our team—now and in the future."

—David B. Genson, PE,
Project Manager,
Barron Collier Companies

Faced with an accelerated schedule of an enterprising developer, the Ave Maria Utility Company was tasked with rapidly building water infrastructure to support the new university and surrounding planned community of Ave Maria, Florida. In partnership with the client, CH2M HILL provided fast-track, in-house, design-build-operate services for centrally located water and wastewater facilities and a wetlands treatment system—all in time for the opening of the university.

Solutions Without Boundaries
