

SDS/2 is the only BIM software that designs connections intelligently. This means it recognizes — and resolves — erectability issues and framing conditions while automatically designing connections.

SDS/2 takes the work out of connecting your steel. By intelligently analyzing the project using your chosen design code, and evaluating all the steel in the project — instead of a single member end — SDS/2 gives you connections that are a perfect fit in the field.

Don't waste any more time or money on macro-based products and connections. Take advantage of SDS/2's connection intelligence to increase your efficiency and streamline production.

Visit sds2.com or call 800.443.0782 to learn how you can start building intelligent connections in your projects today.
