

Build Green

We'll Help You Frame The Solution

You expect the highest quality for your projects, products that are strong and will stand the test of time. And, you know that it's not just good, but good business, to use environmentally responsible solutions. Gerdau Ameristeel understands.

As the second largest steel mini-mill producer and steel recycler in North America, Gerdau Ameristeel produces a full range of structural beams manufactured in the U.S.A., using up to 98% recycled material. This commitment to our customers – and the environment – has led to structural steel products meeting the United States Green Building Council's (USGBC) LEED version 2.1 requirements for Materials and Resources Credits 4.1 and 4.2.

Increase Your Profits

Using a unique Integrated Team concept, Gerdau Fast-Frame can help you save up to 35% of the time it takes to complete your next building project.

A team of construction professionals – including Structural Engineering, Steel Fabrication, Detailing and Steel Erecting – work together, rather than in isolation, to coordinate a faster and more efficient process.

The result is lower costs, faster turnaround, reduced conflicts for everyone, and environmentally responsible solutions.
