

## Flying high-tech

On the Edwards Air Force Base project, we provided on-site construction performance data to the U.S. Army Corps of Engineers within 12 hours, allowing for acceptance of in-place work sooner.

CH2M HILL is a global leader in engineering, procurement, construction, and operations—and a problem solver for the U.S. Army Corps of Engineers and U.S. Air Force. Soaring above industry standards, we provided an integrated design-build approach for this replacement runway, which also serves NASA's space shuttle program.

High-tech innovations included sending grading models directly from the designer to earth-moving equipment operators via GPS, speeding the work process, ensuring accuracy the first time—and keeping this project flying high.
