

## Moving you toward your goals

The potential presence of threatened and endangered species on the Sudley Manor Road project site required early identification of sensitive habitat.

In a partnership under the Virginia Public-Private Transportation Act, CH2M HILL was the design-build (DB) contractor for 3 miles of new urban arterial roadways, signalized at-grade intersections, and a new bridge for the Sudley Manor Road Extension—all while protecting the environment and wildlife.

As a global leader in engineering, procurement, construction, and operations, CH2M HILL provides fully integrated, sustainable DB solutions for your critical infrastructure needs. Our full-service delivery capabilities and expertise, including private-public partnership, make us the ideal partner to move your goals forward.
