

Beyond limitations

"CH2M HILL partnered with the City to provide all the expertise expected from a large full-service firm, but with the personal attention to the client usually reserved for the small local firm."

—David L. Zusi, Director
Water & Wastewater
Utilities, City of Winter Park

The City of Winter Park, Florida, wanted to double the size of its existing Swoope Water Treatment Plant and add an innovative ozone-treatment train—all on a confined 1-acre lot.

As a global leader in full-service engineering, procurement, construction, and operations, CH2M HILL is accustomed to providing infrastructure solutions that look beyond limitations. We designed, built, and commissioned a state-of-the-art, 7.4-mgd plant that surpassed regulatory requirements and used award-winning, Florida-style vernacular architecture—while maximizing available space and equipment.
