

## Delivering design-build ahead of schedule

*"The CH2M HILL-led team has produced quality deliverables that incorporate sound design and cost-effective, quality construction—considerate of long-term operations with regard to reliability and performance. It has been our pleasure to work with CH2M HILL on the successful completion of this major design-build project."*

Dave Poling,  
Colorado Department of  
Transportation, Colorado  
Springs Metro Interstate  
Expansion (COSMIX™)  
Project Manager

During the largest highway construction project in Colorado Springs' history, CH2M HILL, as the managing partner in Rockrimmon Constructors, expanded 12 miles of I-25 to six full lanes. Rockrimmon Constructors rebuilt interchanges, reduced roadway curvature, improved storm drainage, and mitigated roadway noise—in one of the most congested cities of its size, with a population approaching 500,000.

CH2M HILL's design-build approach split the project into four segments, allowing design and construction of multiple segments concurrently. The integrated design-build approach helped finish COSMIX™ in December 2007—one year earlier than required by CDOT.
