

# Precast Modular Solutions.

## Sustainable Construction. Innovative Solutions.

RW's local & regional production model offers numerous contributing advantages for LEED® certification. Local production reduces environmental impacts associated with transportation of modules over long distances & utilizes regional materials. The inherent characteristics of precast modules provide sustainable construction qualities that built-in-place construction cannot achieve. Low emitting materials & energy efficient fixtures add contributory elements in the certification process. Choose the best solution: prefinished precast modules, accessible and collaborative project teams, & highly sustainable construction methods.

**Best Quality. Best Price. Best Way.**
