

Seeing is Understanding

BIM technology offers powerful tools to create and manage building projects more efficiently and creatively. To be truly effective, these complex applications must be intelligently aligned with the processes and goals of the organizations using them.

DC Strategies' mission is to help its clients improve project performance through strategic use of technologies, such as building information modeling (BIM), geospatial databases, simulation and serious gaming, and project collaboration applications.

Our goal is to enhance visual decision making for our clients who deal with complex capital projects. We are information designers with a goal of capturing and designing systems and processes to get information to your professionals for optimal project performance.

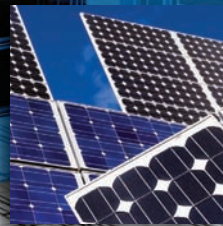

DCS offers has experience on a range of project deliverables, including cost estimating, standard template design, electronic collaboration and data exchange, sequencing and scheduling, work process analysis and asset management. Our clients include: International Code Council (ICC), Autodesk, and the U.S Department of State.
