

Designing flexibility—building success

“By using the design-build project delivery method, we’ll deliver a higher quality project more efficiently and much more quickly than similar projects that employ more traditional construction methods and the taxpayer will get more value for the money they invest in this project.”

—Mike Kennedy, CH2M HILL
Transportation Business
Group President

CH2M HILL, a global leader in engineering, procurement, construction, and operations, is part of a design-build joint venture to widen I-15 through Las Vegas and North Las Vegas, Nevada. Through our efforts, the client is receiving added project value using design innovation.

Our team is optimizing the entire corridor with minor adjustments to centerlines and profiles, minimizing constructed quantities. We also developed innovations to reduce overall project costs while improving mainline operations and safety and increasing construction efficiency.
